

CRITERION C: CHECKLIST

Product is compatible with the information in Criteria A & B (ie: what you designed is what you made - automatic zero if not)		
A list of techniques used in developing the product is identified (see list of techniques that you can draw upon)		
Techniques used are explained <ul style="list-style-type: none"> • If complex techniques are not explained then complexity score will be marked as "moderate" at most • "High scoring solutions (complexity) incorporated features from more than one software. For example, website projects that incorporate JavaScript/PHP/SQL functionality, or programming projects that interact with an Access database or with on-line resources" (2015 subject report) 		
Evidence of algorithmic thinking provided (ingenuity=moderate at best without)		
Development documentation is a **detailed** account		
Different algorithms used have been represented diagrammatically		
Screen shots of programming code and rendered output screens have been provided and **annotated/described**		
Reference material must be acknowledged (source code, software libraries from 3rd parties)		
In-text citation and end-text referencing are used		
Extended writing of process of development: Approximately 1000 words.
